

PHONETIKA® TERMINAL

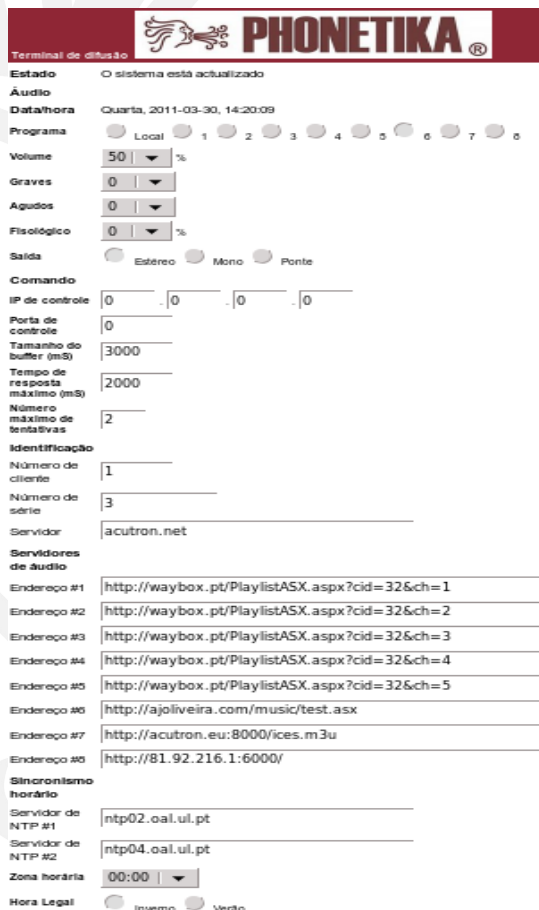

v1.10/11-11-15

A whole new world of internet streaming possibilities...

Aimed for the audio content distribution market, the **PHONETIKA-T** terminal enables a remote client to access http audio.

- Intuitive browser-based user interface
- Shoutcast support
- Asx play-lists support
- Plays mp3, m4a, wma, even if mixed within the same play-list
- Up to 8 streaming sources
- USB up to 4GB local program backup
- Automatic fail-over to local program when internet fails, graceful end-of-track return to internet when it is recovered
- Customizable track reserve for sites with poor internet connections
- Volume, bass, treble, loudness controls
- Scheduled start-stop
- NTP time sync with time-zone and winter/summer time support
- Scheduled or automatic play-list update
- Server-centralized software upgrade information plus start-up play-list definition
- Full remote control, including volume, mute, track (asx only) and playlist forward/back, direct play-list selection
- Keeps track of last played track when the user changes play-lists
- DNS, gateway, automatic or manual IP support
- Based on proven BARIX® hardware.
- Organization licenses available, with server customer control interface
